

Pump wet end components made in CD4MCu offer superior corrosion resistance, hardness, and impact properties that make the alloy highly abrasion resistant in applications where pumps are subject to abrasive wear and chemical corrosion.

TECHNOSUB OFFERS CD4MCu AS AN OPTION FOR ITS ENTIRE AUTO PRIME LINE OF EFFICIENT, RUGGED, HEAVY DUTY PUMPS. POPULAR MODELS IN STOCK. CONTACT US FOR MORE INFORMATION.

Technosub provides its full line of outstanding Trash and High Head pumps in CD4MCu, a high grade duplex stainless steel, for applications where corrosion and/or abrasion are a concern.

CD4MCu is an Fe-Cr-Ni-Cu-Mo alloy with a duplex structure of ferrite and austenite. Moderately high strength and hardness are combined with good ductility and impact properties, resulting in an alloy with superior resistance to abrasion or erosion-corrosion.

CD4MCu provides significantly better stress/corrosive cracking resistance, and less pitting than standard stainless steel. It has a higher strength and thus is more durable.

Many factors must be evaluated when selecting pump end component materials including the liquid being pumped, specific gravity and pH level, GPM, Total Dynamic Head, pump type and speed, and whether the pump will run intermittent or continuous. Technosub engineers can help select the best solution for your application.
