CR, CRI, CRN,
CRE, CRIE, CRNE

1. Product overview

Introduction

This data booklet deals with CR, CRI and CRN as well as CRE, CRIE and CRNE pumps.

CR, CRI, CRN

Fig. 1 CR, CRI and CRN pumps

CR, CRI, CRN pumps are vertical multistage centrifugal pumps. The in-line design enables the pump to be installed in a horizontal one-pipe system where the suction and discharge ports are in the same horizontal plane and have the same pipe dimensions. This design provides a more compact pump design and pipework.

Grundfos CR pumps come with various pump sizes and various numbers of stages to provide the flow and the pressure required.

CR pumps are suitable for a variety of applications from pumping of potable water to pumping of chemicals. The pumps are therefore used in a wide variety of pumping systems where the performance and material of the pump meet specific demands.

The CR pumps consist of two main components: the motor and the pump unit. The motor on a CR pump is a heavy-duty Grundfos specified motor.

The pump unit consists of optimized hydraulics, various types of connections, an outer sleeve, a top and various other parts.

CR pumps are available in various material versions according to the pumped liquid.

CRE, CRIE, CRNE

Fig. 2 CRE, CRIE and CRNE pumps

CRE, CRIE, CRNE pumps are built on the basis of CR, CRI, CRN pumps.

CRE, CRIE, CRNE pumps belong to the so-called E-pump family and are referred to as E-pumps.

The difference between the CR and the CRE pump range is the motor. CRE, CRIE, CRNE pumps are fitted with an E-motor, i.e. a motor with built-in frequency control.

The motor of the CRE pump is a Grundfos MLE motor.

Frequency control enables continuously variable control of motor speed, which makes it possible to set the pump to operation at any duty point. The aim of continuously variable control of the motor speed is to adjust the performance to a given requirement.

CRE, CRIE and CRNE pumps are available with an integrated pressure sensor connected to the frequency control.

The pump materials are the same as those of the CR, CRI, CRN pump range.

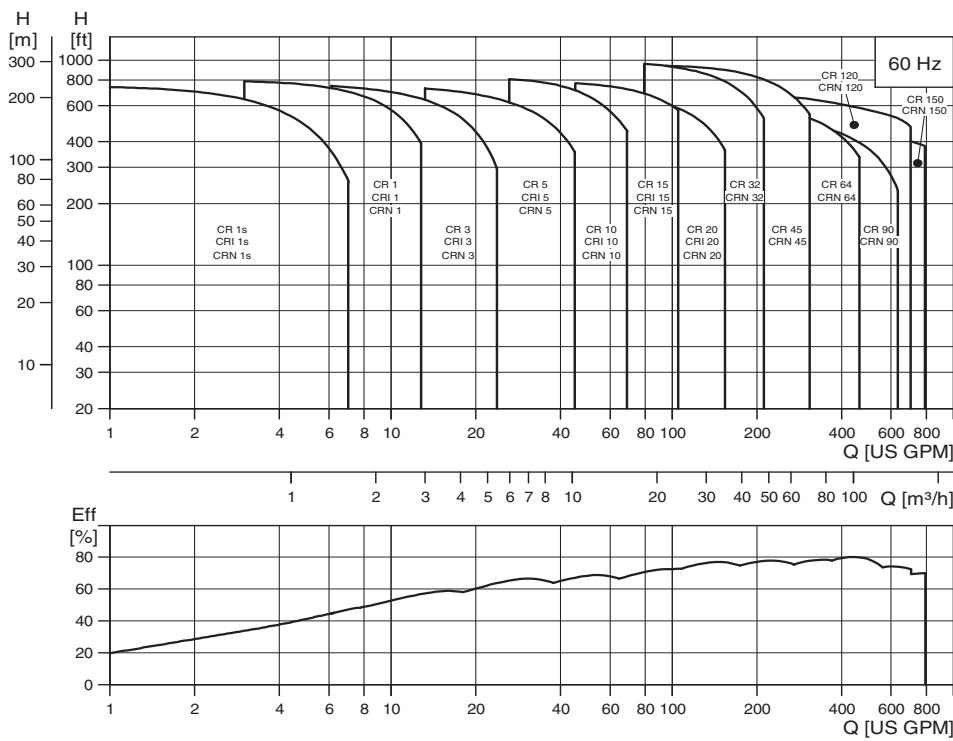

Selecting a CRE pump

Select a CRE pump if:

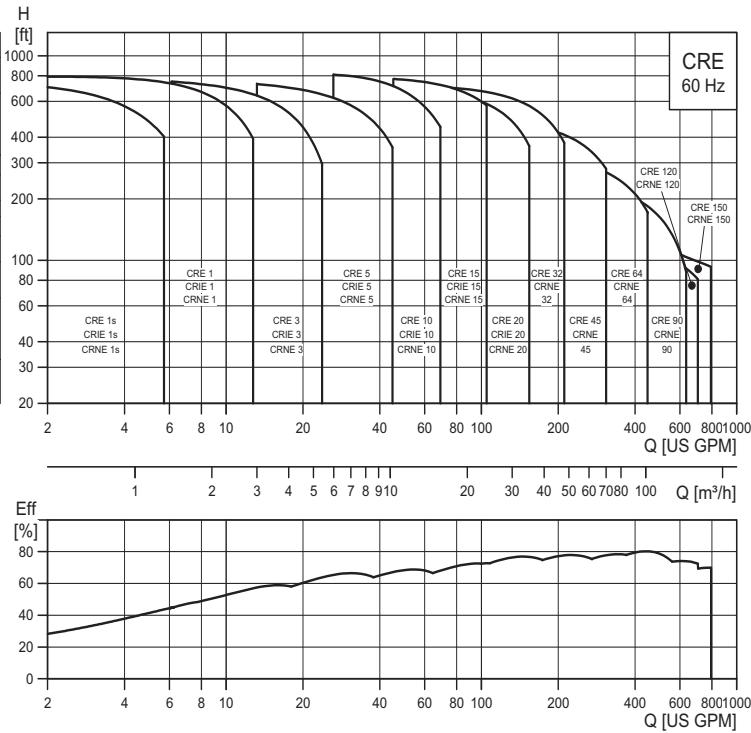

- controlled operation is required, i.e. consumption fluctuates
- constant pressure is required
- communication with the pump is required.

Adaptation of performance through frequency-controlled speed control offers obvious advantages:

- Energy savings
- Increased comfort
- Control and monitoring of the pump performance.

★ CRT, CRTE version available. For further information about CRT, CRTE pumps see, "Pumped liquids" page 73 or related CRT, CRTE product guide.

Pump

The CR and CRE pump is a non-self-priming, vertical multistage centrifugal pump. The pumps are available with a Grundfos standard motor (CR pumps) or a frequency-controlled motor (CRE pumps).

The pump consists of a base and a pump head. The chamber stack and the outer sleeve are secured between the pump head and the base by means of staybolts. The base has suction and discharge ports on the same level (in-line).

All pumps are equipped with a maintenance-free mechanical shaft seal of the cartridge type.

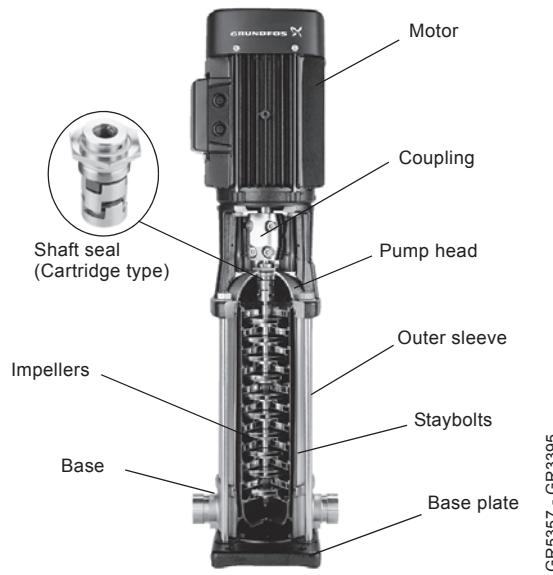

Fig. 3 CR pump

CR pump with ANSI/NSF 61 listing is available. See UL file MH26400 or contact Grundfos.

Motor

Grundfos standard motors - ML and Baldor® motors

CR, CRI and CRN pumps are fitted with a Grundfos specified motor. The motors are all heavy-duty 2-pole, NEMA C-face motors.

Frequency-controlled motors - MLE motors

CRE, CRIE and CRNE pumps are fitted with a totally enclosed, fan-cooled, 2-pole motor with integrated variable frequency drive.

From 0.5 Hp to 1.5 Hp Grundfos offers CRE pumps fitted with single-phase MLE motors (1 x 208-230 V). From 1.0 Hp to 30 Hp Grundfos offers CRE pumps fitted with three-phase MLE motors (3 x 460-480 V). From 1.5 Hp to 7.5 Hp Grundfos offers CRE pumps fitted with three-phase MLE motors (3 x 208-230 V).

Electrical data

| | |
|-------------------------|---|
| Mounting designation | NEMA |
| Insulation class | F & B |
| Efficiency class* | Energy efficient Premium efficiency - on request for 15 Hp and above |
| Enclosure class | TEFC - Totally Enclosed Fan Cooled (Grundfos standard) ODP - Open Drip Proof - on request |
| 60 Hz Standard voltages | 1 x 115/208-230 V 3 x 208-230/460 V 3 x 575 V |

The motors are rated for:

| Approvals | Baldor | ML/MLE | MLE |
|-----------|--------|--------|-----|
| | | | |

* 1 - 10 Hp ML motors are premium efficiency as standard

Optional motors

The Grundfos standard range of motors covers a wide variety of application demands. However, for special applications or operating conditions, custom-built motor solutions can be provided.

For special applications or operating conditions, Grundfos offers custom-built motors such as:

- explosion proof motors
- motors with anti-condensation heating unit
- low-noise motors
- premium efficiency motors
- motors with thermal protection.

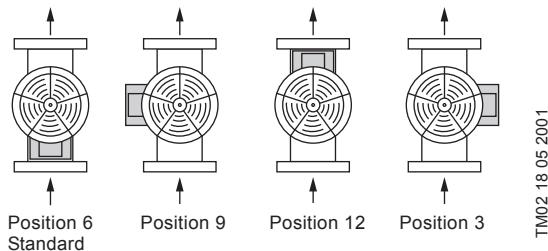

Motor protection

Single-phase Grundfos specified motors up to 7.5 hp have a built-in thermal overload switch.

Three-phase motors **must** be connected to a motor starter in accordance with local regulations.

Terminal box positions

As standard the terminal box is mounted on the suction side of the pump.

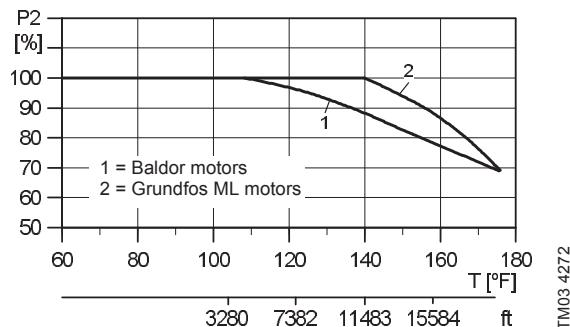

TM02 18 05 2001

Fig. 4 Terminal box positions

Ambient temperature

Ambient temperature: Maximum +104 °F.

If the ambient temperature exceeds +104 °F or if the motor is located 3280 feet above sea level or higher, the motor output (P2) must be reduced due to the low cooling effect of the air. In such cases, it may be necessary to use a motor with a higher output.

TM03 4272

Fig. 5 Relationship between motor output (P2) and ambient temperature

Viscosity

The pumping of liquids with densities or kinematic viscosities higher than those of water will cause a considerable pressure drop, a drop in the hydraulic performance and a rise in the power consumption.

In such situations the pump should be equipped with a larger motor. If in doubt, contact Grundfos.

2. Product overview for E-pumps

Examples of E-pump applications

CRE, CRIE and CRNE pumps are the ideal solution in a number of applications characterized by a need for variable flow at constant pressure. The pumps are suited for water supply systems and pressure boosting, but also industrial applications.

Depending on the nature of the application, the pumps offer energy-savings, increased comfort or improved processing.

E-pumps in the service of industry

Industry uses a large number of pumps in many different applications. Demands on pumps in terms of pump performance and mode of operation make speed control a must in many applications.

Below are mentioned some of the applications in which E-pumps are often used.

Constant pressure

- Water supply
- Washing and cleaning systems
- Distribution from waterworks
- Humidifying systems
- Water treatment systems
- Process boosting systems, etc.

Example: Within industrial water supply, E-pumps with integrated pressure sensors are used to ensure a constant pressure in the piping network. From the sensor, the E-pump receives inputs about changes of pressure as a result of changes in the consumption. The E-pump responds to the input by adjusting the flow until the pressure is equalized. The constant pressure is stabilized once more on the basis of a preset setpoint.

Constant temperature

- Air-conditioning systems at industrial plants
- Industrial cooling systems
- Industrial freezing systems
- Casting and molding tools, etc.

Example: In industrial freezing systems, E-pumps with temperature sensor increase comfort and lower operating costs compared with pumps without a temperature sensor.

An E-pump continuously adapts its performance to the changing demands reflected in the differences in temperature of the liquid circulating in the freezing system. Thus, the lower the demand for cooling, the smaller the quantity of liquid circulated in the system and vice versa.

Constant flow

- Steam boiler systems
- Condensate systems
- Sprinkler irrigation systems
- Chemical industry, etc.

Example: In a steam boiler, it is important to be able to monitor and control pump operation to maintain a constant level of water in the boiler.

By using an E-pump with level sensor mounted in the boiler, it is possible to maintain a constant water level. A constant water level ensures optimum and cost-efficient operation as a result of a stable steam production.

Dosing

- Chemical industry (i.e. control of pH-values)
- Petrochemical industry
- Paint industry
- Degreasing systems
- Bleaching systems, etc.

Example: In the petrochemical industry, E-pumps with pressure sensors are used as dosing pumps. The E-pumps help to ensure that the correct mixture ratio is achieved when more liquids are combined.

E-pumps functioning as dosing pumps improve processing and offer energy-savings.

E-pumps in commercial building services

Commercial building services use E-pumps to maintain a constant pressure or a constant temperature based on a variable flow.

E-pumps are used in applications such as

Constant pressure

- Water supply in high-rise buildings i.e. office buildings, hotels, etc.

Example: E-pumps with pressure sensors are used for water supply in high-rise buildings to ensure a constant pressure even at the highest draw-off point. As the consumption pattern and by that the pressure changes during the day, the E-pump continuously adapts its performance until the pressure is equalized.

Constant temperature

- Air-conditioning systems in hotels, schools,
- Building cooling systems, etc.

Example: E-pumps are an excellent solution in buildings where constant temperature is essential. E-pumps keep the temperature constant in air-conditioned high-rise glass buildings, irrespective of the seasonal fluctuations of the outdoor temperature, and various heat impacts inside the building.

3. Control of E-pumps

Control options of E-pumps

Communication with CRE, CRIE, CRNE pumps is possible by means of

- a central management system
- remote control (Grundfos R100) or
- a control panel.

The purpose of controlling an E-pump is to monitor and control the pressure, temperature, flow and liquid level of the system.

Central management system

Communication with the E-pump is possible even though the operator is not present near the E-pump. Communication is enabled by having connected the E-pump to a central management system allowing the operator to monitor and change control modes and setpoint settings of the E-pump.

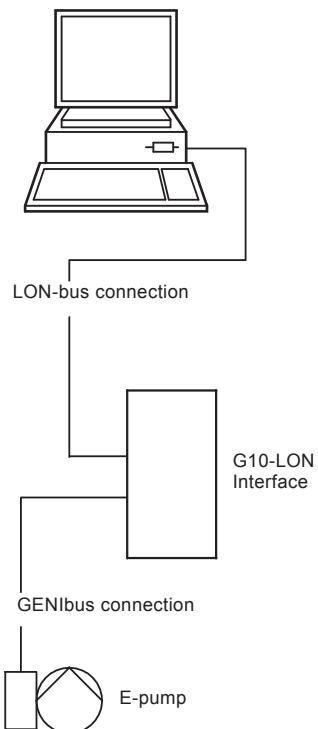

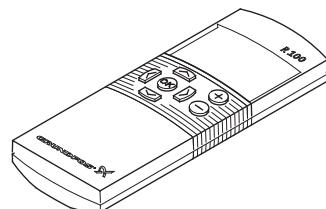

Fig. 6 Structure of a central management system

TM06592 1103

Remote control

The R100 remote control produced by Grundfos is available as an accessory.

The operator communicates with the E-pump by pointing the IR-signal transmitter at the control panel of the E-pump terminal box.

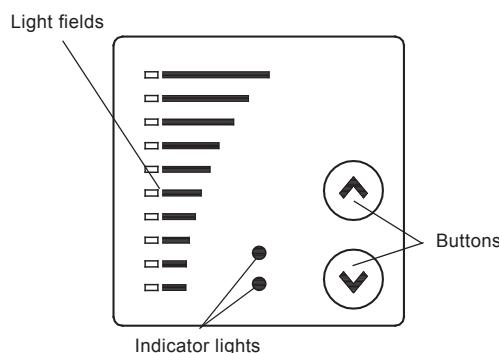

TM00 4498 2802

Fig. 7 R100 remote control

On the R100 display it is possible to monitor and change control modes and settings of the E-pump.

Control panel

The control panel of the E-pump terminal box makes it possible to change the setpoint settings manually.

TM00 7600 1196

Fig. 8 Control panel on CRE pump

Control modes for E-pumps

Grundfos offers CRE, CRIE and CRNE pumps in two different variants:

- CRE, CRIE and CRNE with integrated pressure sensor
- CRE, CRIE and CRNE without sensor.

CRE, CRIE, CRNE with integrated pressure sensor

CRE, CRIE and CRNE pumps with integrated pressure sensors are suitable for applications where you want to control the pressure after the pump, irrespective of the flow. For further information, see the section

Examples of E-pump applications on page 10. Signals of pressure changes in the piping system are transmitted continuously from the sensor to the pump.

The pump responds to the signals by adjusting its performance up or down to compensate for the

pressure difference between the actual and the desired pressure. As this adjustment is a continuous process, a constant pressure is maintained in the piping system.

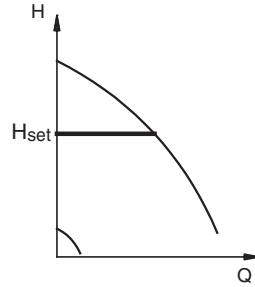

TM02 7398 3403

Fig. 9 CRE, CRIE and CRNE pumps

A CRE, CRIE or CRNE pump with integrated pressure sensor facilitates installation and commissioning. CRE, CRIE and CRNE pumps with integrated pressure sensor can be set to:

- constant-pressure mode (factory setting) or
- constant-curve mode.

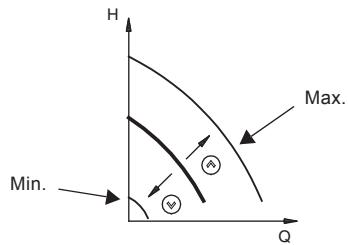

In **constant-pressure** mode, the pump maintains a preset pressure after the pump, irrespective of the flow, see figure below.

TM00 9322 4796

Fig. 10 Constant pressure mode

In **constant-curve** mode, the pump is not controlled. It can be set to pump according to a preset pump characteristic within the range from min. curve to max. curve, see figure below.

TM00 9323 4796

Fig. 11 Constant curve mode

CRE, CRIE and CRNE without sensor

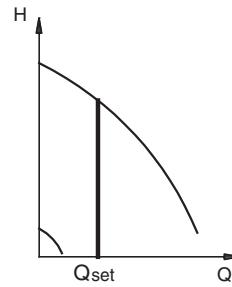

CRE, CRIE and CRNE pumps without sensors are suitable for applications where

- uncontrolled operation is required
- you want to fit another sensor later in order to control the flow, temperature, differential temperature, liquid level, pH value, etc at some arbitrary point in the system.

CRE, CRIE and CRNE pumps without sensor can be set to:

- controlled-operation mode or
- uncontrolled-operation mode (factory-setting).

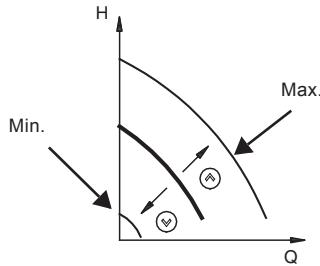

In **controlled-operation** mode, the pump adjusts its performance to the desired setpoint, see figure below.

TM02 7264 2803

Fig. 12 Constant flow mode

In **uncontrolled-operation** mode, the pump operates according to the constant curve set, see figure below.

TM00 9323 4796

Fig. 13 Constant curve mode

CRE, CRIE and CRNE pumps can be fitted with sensor types listed on page 81.

¹⁾ In August 2003 the NEMA version pump code was discontinued for all material numbers created by Grundfos manufacturing companies in North America. The NEMA version pump code will still remain in effect for existing material numbers. NEMA version pumps built in North America after this change will have either an A or U as the pump version code depending on the date the material number was created.

Operating range of the shaft seal

The operating range of the shaft seal depends on operating pressure, pump type, type of shaft seal and liquid temperature. The following curves apply to clean water and water with anti-freeze liquids. For selecting the right shaft seal, see *List of pumped liquids* on page 73.

CR 1s - CR 20

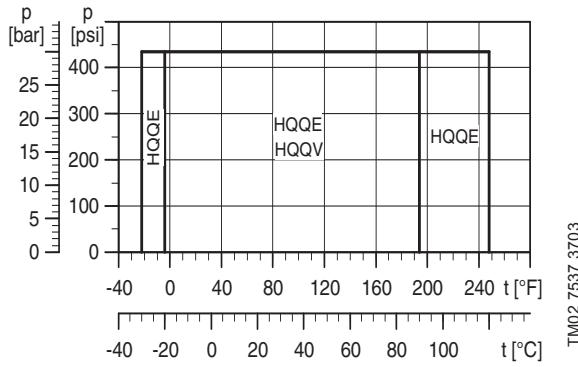

Fig. 14 Operating range of standard shaft seals for CR 1s - CR 20

CR 32 - CR 150 (3.0-60 Hp)

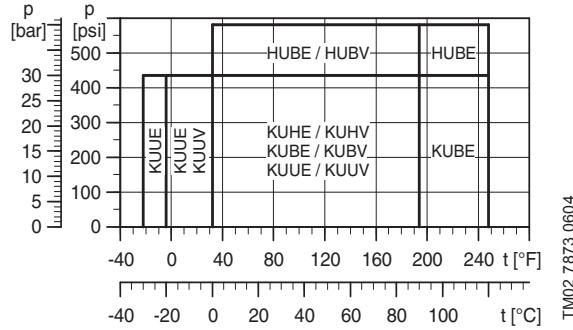

Fig. 15 Operating range of standard shaft seals for CR 32 - CR 150 (3.0-60 Hp)

CR 120 - CR 150 (75-100 Hp)

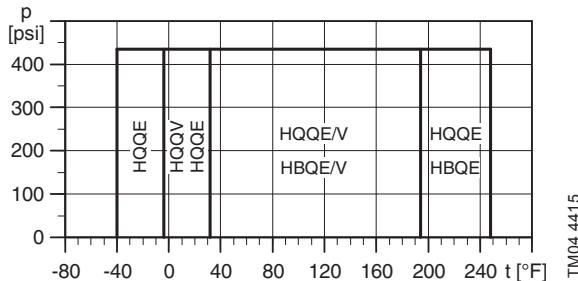

Fig. 16 Operating range of standard shaft seals for CR 120 - CR 150 (75-100 Hp)

| Shaft seal | Description | Max. temp. range [°F] |
|------------|--|-------------------------|
| HQQE | O-ring (cartridge) (balanced seal), SiC/SiC, EPDM | -22 °F to +248 °F |
| HBQE | O-ring (cartridge) (balanced seal), Carbon/SiC, EPDM | +32 °F to +248 °F |
| HQQV | O-ring (cartridge) (balanced seal), SiC/SiC, FKM | -4 °F to +194 °F |
| HUBE | O-ring (cartridge) (balanced seal), TC/carbon, EPDM | +32 °F to +248 °F |
| HUBV | O-ring (cartridge) (balanced seal), TC/carbon, FKM | +32 °F to +194 °F |
| KUBE | Bellows, metal (cartridge), TC/carbon, EPDM | +32 °F to +248 °F |
| KUBV | Bellows, metal (cartridge), TC/carbon, FKM | +32 °F to +194 °F |
| KUHE | Bellows, metal (cartridge), TC/Carbon with embedded TC, EPDM | +32 °F to +194 °F |
| KUHV | Bellows, metal (cartridge), TC/Carbon with embedded TC, FKM | +32 °F to +194 °F |
| KUUE | Bellows, metal (cartridge), TC/TC, EPDM | -22 °F to +194 °F |
| KUUUV | Bellows, metal (cartridge), TC/TC, FKM | -4 °F to +194 °F |

Note: TC= tungsten carbide

See section *Lists of variants - on request* on page 82, in case of extreme temperatures:

- low temperatures down to -40 °F or
- high temperatures up to +356 °F.

Maximum inlet pressure

The following table shows the maximum permissible inlet pressure. However, the current inlet pressure + the pressure against a closed valve **must** always be lower than the maximum permissible operating pressure.

If the maximum permissible operating pressure is exceeded, the conical bearing in the motor may be damaged and the life of the shaft seal reduced.

| CR, CRI, CRN 1s | | |
|---------------------------------|-----------|-----------|
| 1s-2 | > 1s-27 | 145 [psi] |

| 150-1 | > 150-2 | 218 [psi] |
| 150-3-2 | > 150-4-1 | 290 [psi] |

Example of operating and inlet pressures

The values for operating and inlet pressures shown in the tables must not be considered individually but must always be compared, see the following examples:

Example 1:

The following pump type has been selected:

CR 3-10 A-A-A

Max. operating pressure: **232 psi**

Max. inlet pressure: **145 psi**

Discharge pressure against a closed valve: **139.2 psi**, see page 33.

This pump is not allowed to start at an inlet pressure of 145 psi, but at an inlet pressure of $232.0 - 139.2 = 92.8$ psi.

Example 2:

The following pump has been selected:

CR 10-2 A-GJ-A

Max. operating pressure: **232 psi**

Max. inlet pressure: **116 psi**

Discharge pressure against a closed valve: **42 psi (97 ft)**, see page 41.

This pump is allowed to start at an inlet pressure of 116 psi, as the discharge pressure is only 42 psi, which results in an operating pressure of $116 + 42 = 158$ psi. On the contrary, the max. operating pressure of this pump is limited to 158 psi, as a higher operating pressure will require an inlet pressure of more than 116 psi.

In case the inlet or operating pressure exceeds the pressure permitted, see section *Lists of variants - on request* on page 82.

7. Selection and sizing

Selection of pumps

Selection of pumps should be based on

- The duty point of the pump (see section 1)
- Sizing data such as pressure loss as a result of height differences, friction loss in the pipework, pump efficiency etc. (see section 2)
- Pump materials (see section 3)
- Pump connections (see section 4)
- Shaft seal (see section 5).

1. Duty point of the pump

From a duty point it is possible to select a pump on the basis of the curve charts in the section 8. *Performance curves/Technical data* starting on page 25.

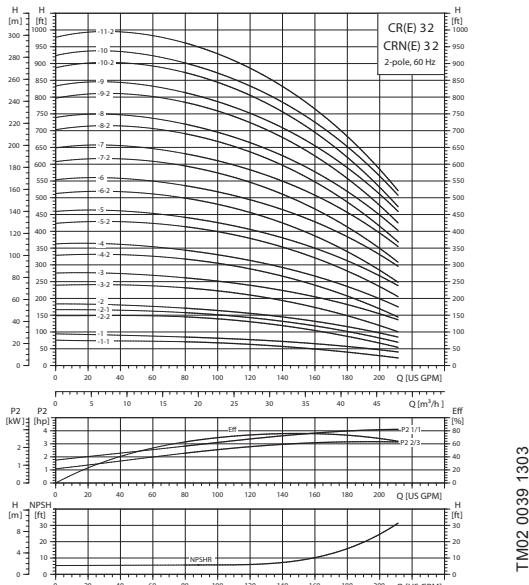

Fig. 17 Example of a curve chart

2. Sizing data

When sizing a pump the following must be taken into account.

- Required flow and pressure at the point of use.
- Pressure loss as a result of height differences (H_{geo}).
- Friction loss in the pipework (H_f). It may be necessary to account for pressure loss in connection with long pipes, bends or valves, etc.
- Best efficiency at the estimated duty point.
- NPSH value.

For calculation of the NPSH value, see *Minimum inlet pressure - NPSHA* on page 23.

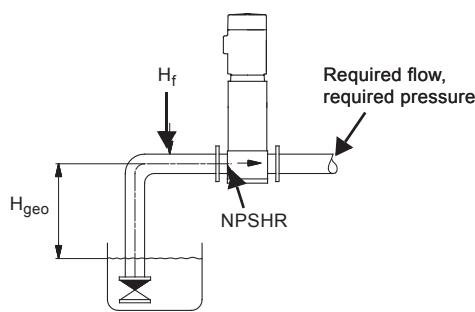

Fig. 18 Sizing data

TM02 6711 1403

Efficiency

Before determining the point of best efficiency the operation pattern of the pump needs to be identified. Is the pump expected to operate at the same duty point, then select a CR pump which is operating at a duty point corresponding with the best efficiency of the pump.

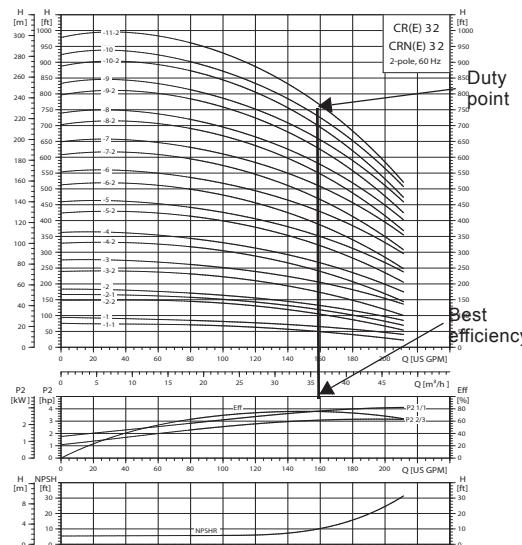

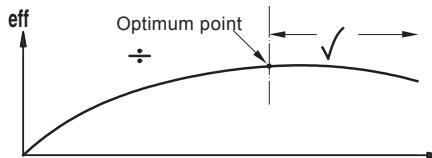

Fig. 19 Example of a CR pump's duty point

TM02 8579 0504

As the pump is sized on the basis of the highest possible flow, it is important to always have the duty point to the right of the optimum efficiency point (see fig. 20, range with check mark). This must be considered in order to keep efficiency high when the flow drops.

TM02 8579 0504

Fig. 20 Best efficiency

Normally, E-pumps are used in applications characterized by a variable flow. Consequently, it is not

possible to select a pump that is constantly operating at optimum efficiency.

In order to achieve optimum operating economy, the pump should be selected on the basis of the following criteria:

- The max. required duty point should be as close as possible to the QH curve of the pump.
- The required duty point should be positioned so that P₂ is close to the max. point of the 100 % curve.

Between the min. and max. performance curve E-pumps have an infinite number of performance curves each representing a specific speed. Therefore it may not be possible to select a duty point close to the 100 % curve.

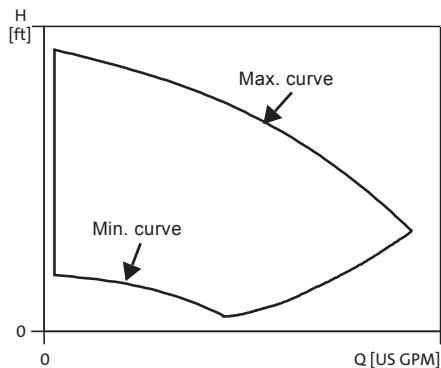

Fig. 21 Min. and max. performance curves

In situations where it is not possible to select a duty point close to the 100 % curve the affinity equations to the right can be used. The head (H), the flow (Q) and the input power (P) are all the appropriate variables for the motor speed (n).

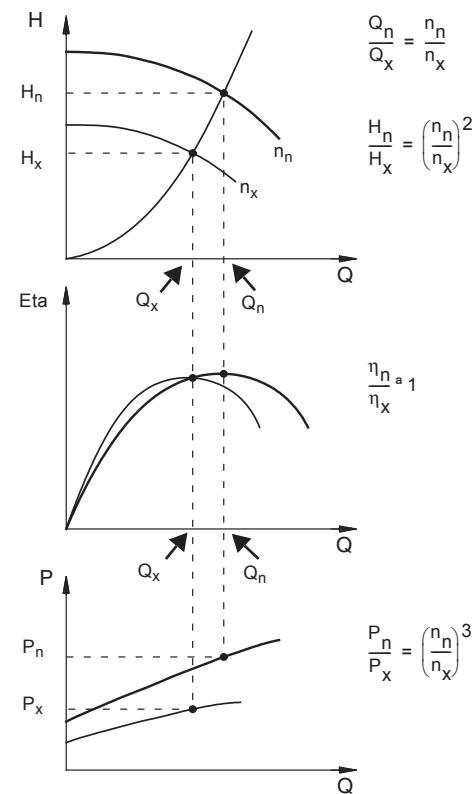

TM02 7572 4803

Note:

The approximated formulas apply on condition that the system characteristic remains unchanged for nn and nx and that it is based on the formula $H = k \times Q^2$, where k is a constant.

The power equation implies that the pump efficiency is unchanged at the two speeds. In practice this is **not** quite correct.

Finally, it is worth noting that the efficiencies of the frequency converter and the motor **must** be taken into account if a precise calculation of the power saving resulting from a reduction of the pump speed is wanted.

| Q_x | Current flow in US gpm |
| n_n | Rated motor speed in min^{-1} ($n_n = 3500 \text{ min}^{-1}$) |
| n_x | Current motor speed in min^{-1} |
| η_n | Rated efficiency in % |
| η_x | Current efficiency in % |

WinCAPS and WebCAPS

WinCAPS and WebCAPS are both selection programs offered by Grundfos.

The two programs make it possible to calculate an E-pump's specific duty point and energy consumption.

By entering the sizing data of the pump, WinCAPS and WebCAPS can calculate the exact duty point and energy consumption. For further information see page 87 and page 88.

3. Material

The material variant (CR(E), CRI(E), CRN(E)) should be selected based of the liquid to be pumped. The product range covers three basic types.

- The CR(E), CRI(E) pump types are suitable for clean, non-aggressive liquids such as potable water, oils, etc.
- The CRN(E) pump type is suitable for industrial liquids and acids, see *List of pumped liquids* on page 73 or contact Grundfos.

For saline or chloride-containing liquids such as sea water, CRT(E) pumps of titanium are available.

4. Pump connection

Selection of pump connection depends on the rated pressure and pipework. To meet any requirement the CR(E), CRI(E) and CRN(E) pumps offer a wide range of flexible connections such as:

- Oval flange (NPT) - fig. 24
- ANSI flange - fig. 24
- PJE coupling - fig. 24
- Clamp coupling
- Union (NPT[M])
- Other connections on request.

5. Shaft seal

As standard, the CR(E) range is fitted with a Grundfos shaft seal (Cartridge type) suitable for the most common applications, see fig. 25.

The following three key parameters **must** be taken into account, when selecting the shaft seal:

- Type of pumped liquid
- liquid temperature and
- Maximum pressure.

Grundfos offers a wide range of shaft seal variants to meet specific demands see *List of pumped liquids* on page 73.

6. Inlet pressure and operating pressure

Do **not** exceed the limit values stated on page 17 and page 19 as regards these pressures:

- maximum inlet pressure and
- maximum operating pressure.

TM02 1201 0601

TM02 0538 44800

Minimum inlet pressure - NPSHA

Calculation of the inlet pressure "H" is recommended in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the suction side of the pump. The maximum suction lift "H" in feet can be calculated as follows:

$$H = p_b - NPSHR - H_f - H_v - H_s$$

p_b = Barometric pressure in feet absolute.
(Barometric pressure can be set to 33.9 feet.
At sea level. In closed systems, p_b indicates system pressure in feet.)

NPSHR = Net Positive Suction Head Required in feet.
(To be read from the NPSHR curve at the highest flow the pump will be delivering).

H_f = Friction loss in suction pipe in feet.
(At the highest flow the pump will be delivering.)

H_v = Vapor pressure in feet. (To be read from the vapor pressure scale. " H_v " depends on the liquid temperature " T_m ").

H_s = Safety margin = minimum 2.0 feet.

If the "H" calculated is positive, the pump can operate at a suction lift of maximum "H" feet.

If the "H" calculated is negative, an inlet pressure of minimum "H" feet is required.

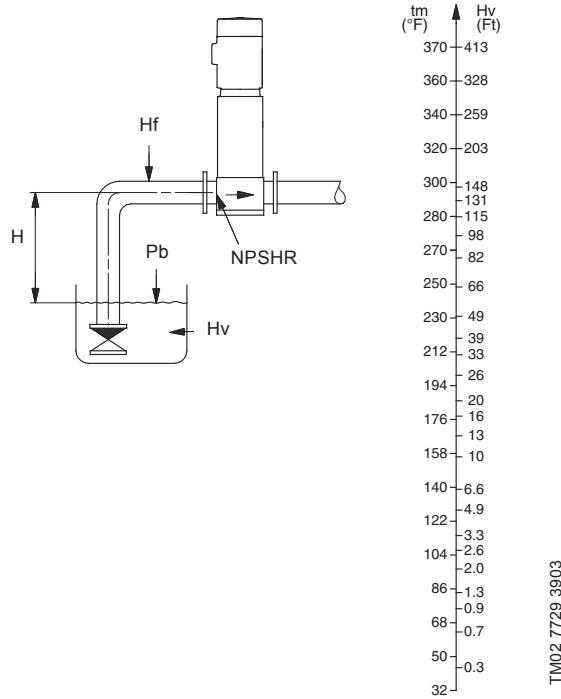

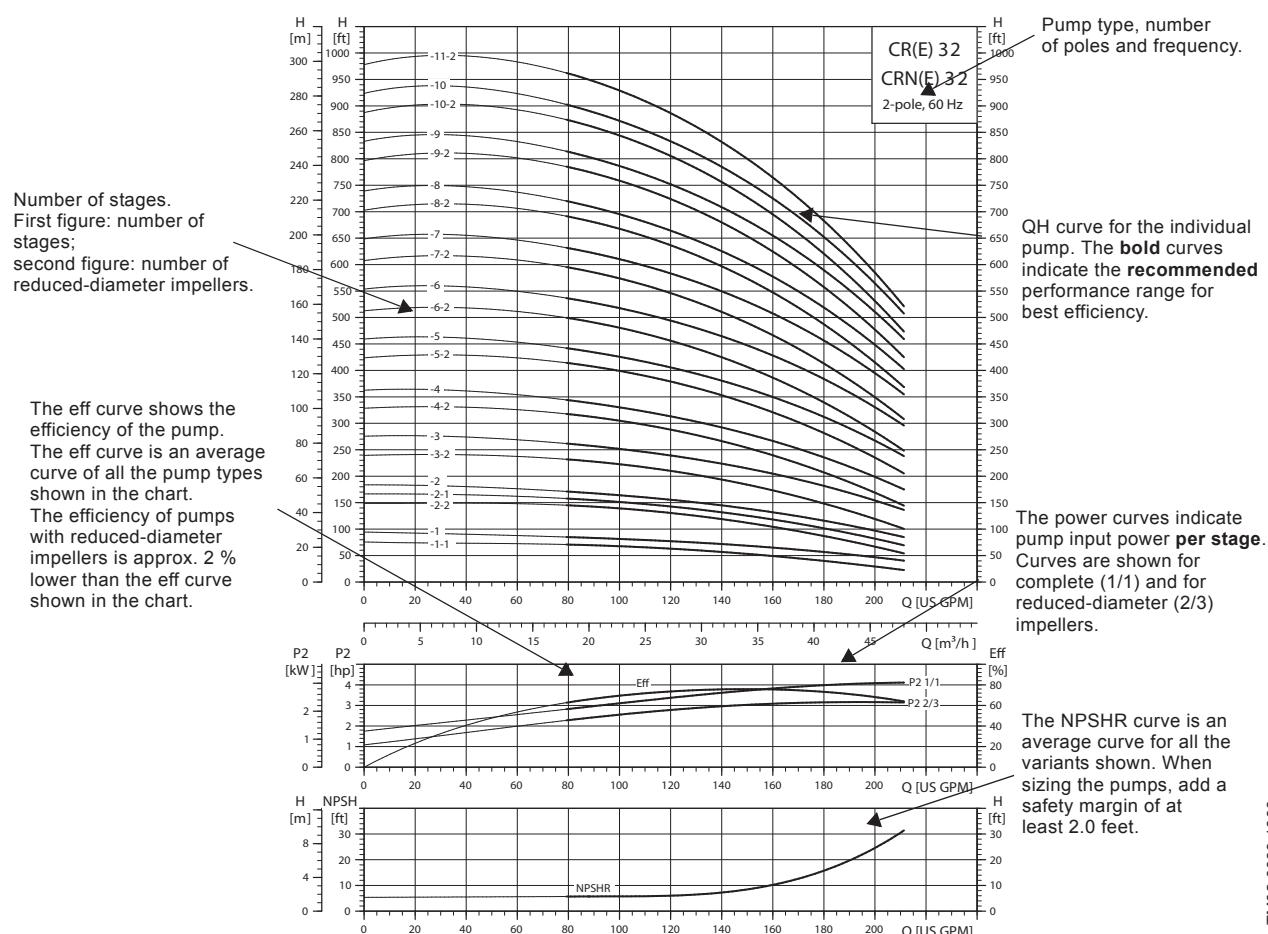

Fig. 26 Minimum inlet pressure - NPSHR

Note: In order to avoid cavitation **never**, select a pump whose duty point lies too far to the right on the NPSHR curve.

Always check the NPSHR value of the pump at the highest possible flow.

In case a lower NPSHR value is required, see *Lists of variants - on request* on page 82.

How to read the curve charts

TM02 0039 1303

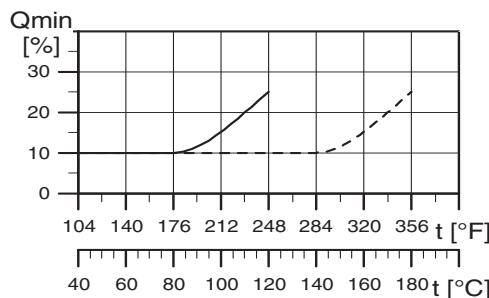

Fig. 27 How to read the curve charts

Guidelines to performance curves

The guidelines below apply to the curves shown on the following pages:

1. The motors used for the measurements are standard motors (ODP, TEFC or MLE).
2. Measurements have been made with airless water at a temperature of 68 °F.
3. The curves apply to a kinematic viscosity of $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt).
4. Due to the risk of overheating, the pumps should not be used at a flow below the minimum flow rate.
5. The QH curves apply to actual speed with the motor types mentioned at 60 Hz.

The curve below shows the minimum flow rate as a percentage of the nominal flow rate in relation to the liquid temperature. The dotted line shows a CR pump fitted with an air-cooled top assembly.

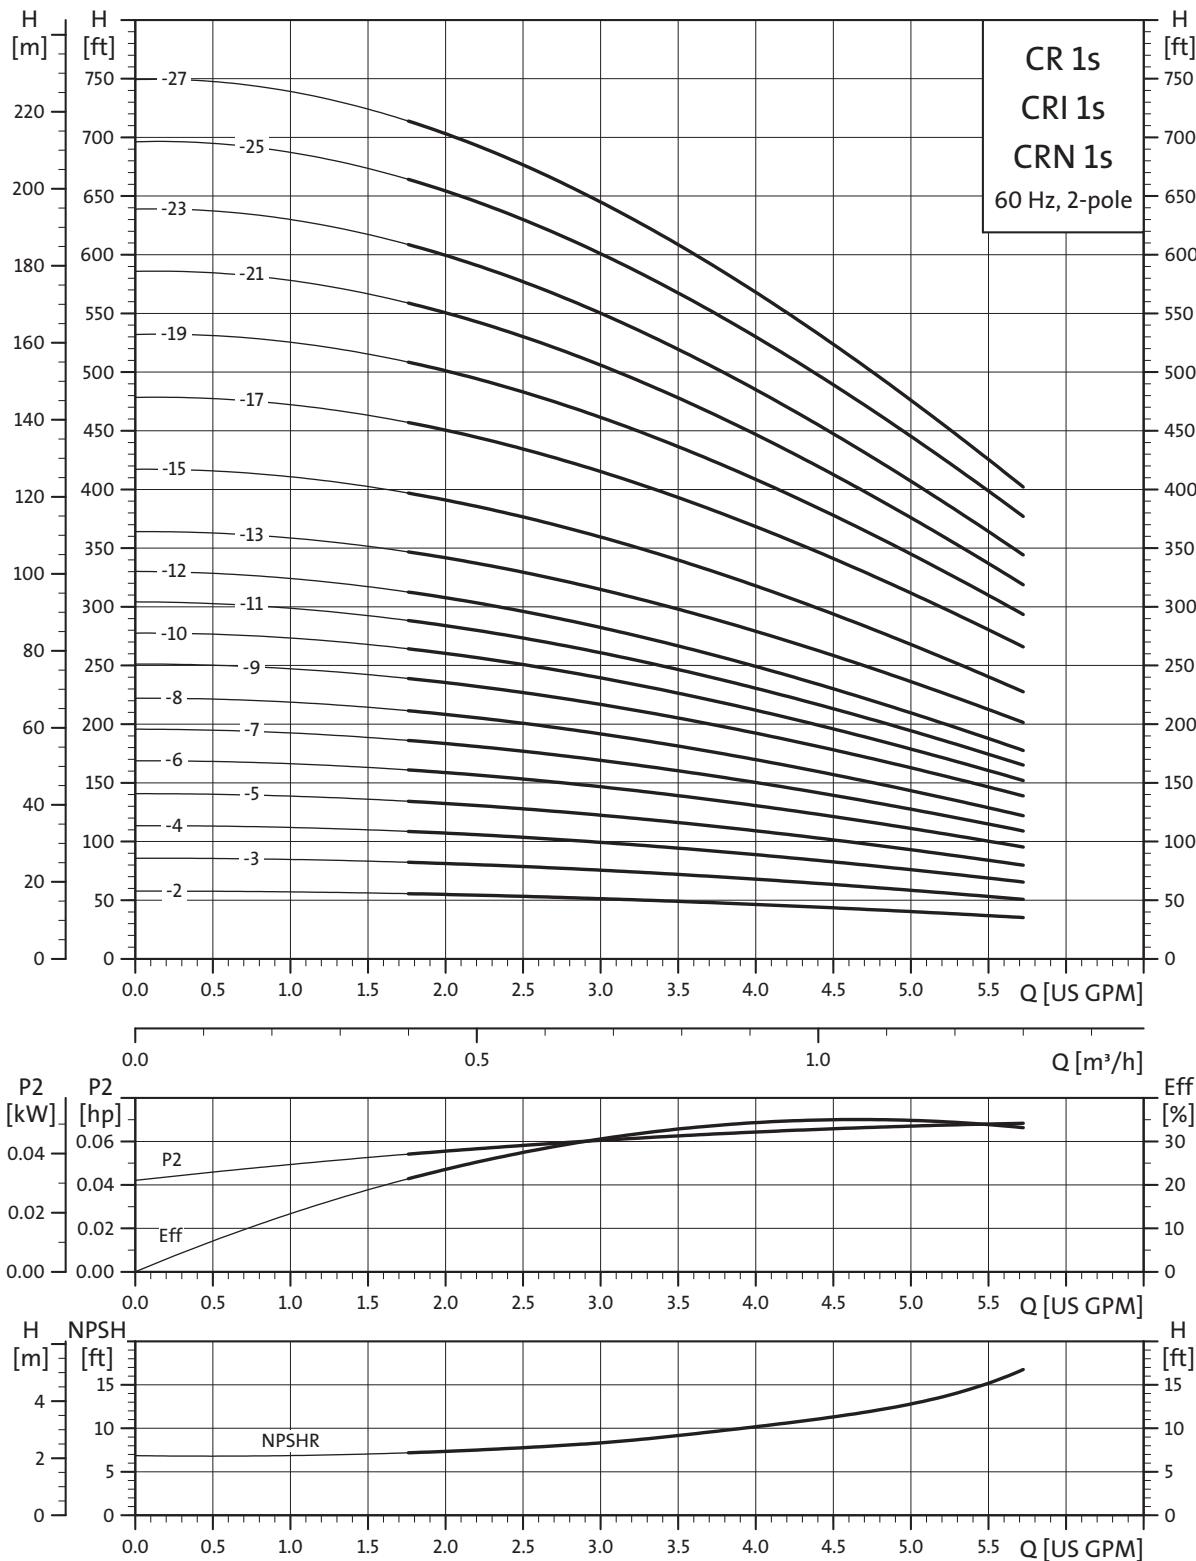

TM02 7538 3703

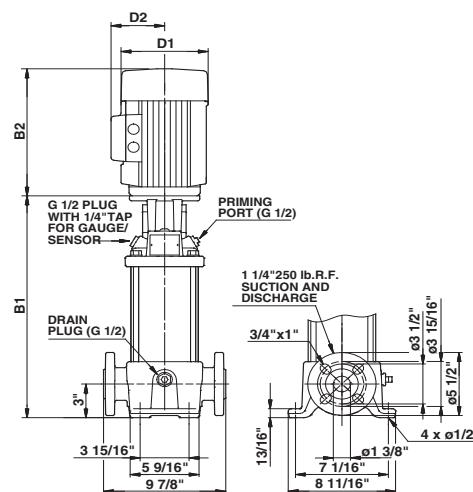

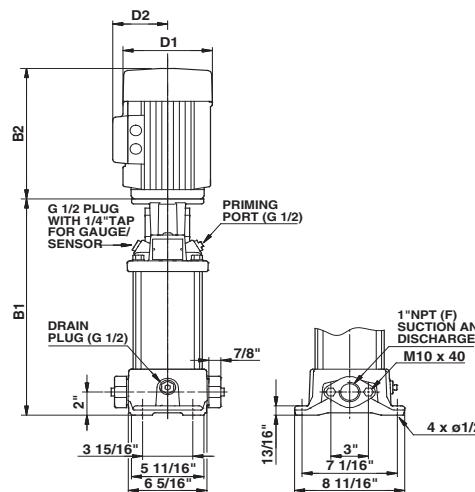

Fig. 28 Minimum flow rate

9. Motor data

Standard motors in the CR range

Motors used in the CR pump range are:

- Grundfos ML or MLE motors
- Grundfos specified **Baldor® motors**

The information in the tables below applies to following motors type and size:

| Type | Phase | Motor range [HP] | Cooling method |
|--------|-------|------------------|----------------|
| ML | 3 | 1/3 - 10 | TEFC |
| | 1 | 1/3 - 10 | TEFC |
| Baldor | 3 | 15 - 100 | TEFC |
| | 3 | 15 - 100 | ODP |
| MLE | 1 | 1/2 - 1 1/2 | TEFC |
| | 3 | 1 - 10 | TEFC |

Grundfos CR pumps are supplied with heavy-duty 2-pole, NEMA energy efficient C-frame motors built or selected to our rigid specifications. All CR pump motors have heavy-duty bearings for maximum thrust requirements.

TEFC motors

It is not recommended that an off-the-shelf standard Baldor motor be used on a Grundfos pump. Ideally, the best motor choice would be the Grundfos specified motor.

Single-phase Grundfos specified motors up to 7.5 hp have a built-in thermal overload switch.

Other motor types are available (i.e., Explosion proof, Mill and Chem duty, Premium Efficiency, etc.); consult local Grundfos company for more information.

Pumps supplied by Grundfos Canada are normally supplied with motors from other manufacturers. 575 volt motors meet NEMA energy efficient standards. Dimensions and data will vary, contact local Grundfos company for more information.

All values are subject to change without notice.

10. Pumped liquids

Pumped liquids

Thin, non-explosive liquids, not containing solid particles or fibers. The liquid must not chemically attack the pump materials. When pumping liquids with a density and/or viscosity higher than that of water, oversized motors must be used, if required.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are the chloride content, pH value, temperature and content of chemicals, oils, etc.

Please note that aggressive liquids (e.g. sea water and some acids) may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion. The CR(E), CRI(E), CRN(E) pump types are suitable for the following liquids:

CR(E), CRI(E)

- Non-corrosive liquids.

For liquid transfer, circulation and pressure boosting of cold or hot clean water.

CRN(E)

- Industrial liquids.

In systems where all parts in contact with the liquid must be made of high-grade stainless steel.

CRT(E)

- Saline liquids
- hypochlorites
- acids.

For saline or chloride-containing liquids such as sea water or oxidizing agents such as hypochlorites, CRT(E) pumps of titanium are available. See separate product guide on CRT(E).

List of pumped liquids

A number of typical liquids are listed on the following pages.

Other pump versions may be applicable, but those stated in the list are considered to be the best choices. The table is intended as a general guide only, and cannot replace actual testing of the pumped liquids and pump materials under specific working conditions.

The list should, however, be applied with some caution as factors such as the following may affect the chemical resistance of a specific pump version:

- concentration of the pumped liquid
- liquid temperature
- pressure.

Safety precautions must be made when pumping dangerous liquids.

Notes

| | |
|----------|---|
| D | Often with additives. |
| E | Density and/or viscosity differ from that of water. Allow for this when calculating motor output and pump performance. |
| F | Pump selection depends on many factors. Contact Grundfos. |
| H | Risk of crystallization/precipitation in shaft seal |
| 1 | The pumped liquid highly inflammable. |
| 2 | The pumped liquid is combustible. |
| 3 | Insoluble in water. |
| 4 | Low self-ignition point. |

11. Accessories

Pipework connection

For pipework connection, various sets of counter flanges and couplings are available.

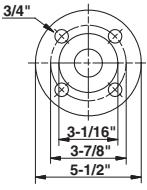

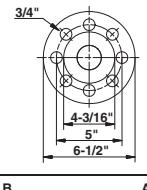

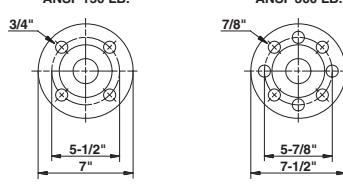

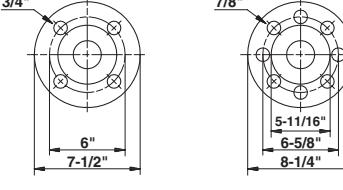

Adapter kit

6" flanges are available for CR, CRN 120 and 150 pumps. To use 6" flanges, two adapter kits must be ordered per pump.

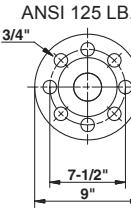

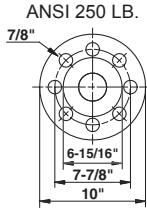

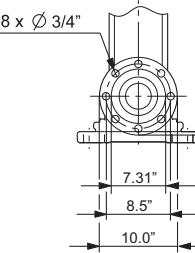

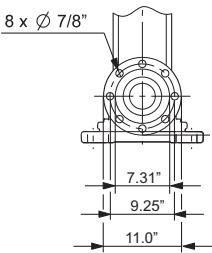

| Adapter kit | Pump type | Pipe connection | Number of flange kits needed | Product number |
|---|--------------------|----------------------------------|------------------------------|----------------|
|  | CR 120 CR 150 | 6" RF 250 lb. Ductile iron | 2 | 96638184 |
|  | CRN 120 CRN 150 | 6" RF 300 lb. ANSI 316 SS | 2 | 96638186 |

Counter flanges for CR(E)

A set consists of two counter flanges, two gaskets, bolts and nuts.

| Counter flange | Pump type | Description | Pressure class | Pipework connection | Product number |
|--|--|-------------|----------------|---------------------|----------------|
|  | CR 1s CR(E) 1 CR(E) 3 CR(E) 5 | Threaded | ANSI 250 lb. | 1 1/4" NPT | 91122260 |
|  | CR(E) 10 CR(E) 15 CR(E) 20 | Threaded | ANSI 250 lb. | 2" NPT | 335021 |
|  | CR(E) 32 | Threaded | ANSI 125 lb. | 2 1/2" NPT | 559601 |
| | | Threaded | ANSI 250 lb. | 2 1/2" NPT | 345050 |
|  | CR(E) 45 | Threaded | ANSI 125 lb. | 3" NPT | 569601 |
| | | Threaded | ANSI 250 lb. | 3" NPT | 91121952 |

Counter flanges for CRN(E)

Counterflanges for CRN(E) pumps are made of stainless steel according to AISI 316.

A set consists of two counter flanges, two gaskets, bolts and nuts.

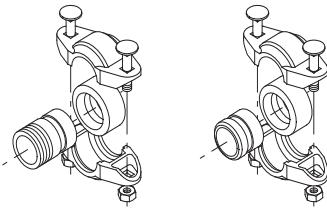

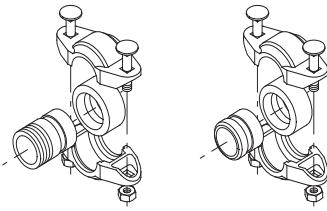

| Counter flange | Pump type | Description | Pressure class | Pipework connection | Product number |
|---|--|-------------|----------------|---------------------|----------------|
| 3/4" | TM02 5691 3802 CRI(E), CRN(E) 1s, 1, 3 and 5 | Threaded | ANSI 300 lb. | 1 1/4" NPT | 91129013 |

| 8 x Ø 7/8"  | | Threaded | ANSI 300 lb. | 5" NPT | 91121959 |

PJE couplings for CRN(E)

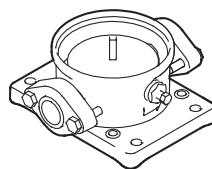

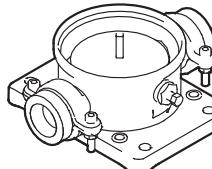

Couplings for CRN(E) pumps are made of stainless steel according to AISI 316.

A set consists of two couplings, two gaskets, two pipe stub and bolts and nuts.

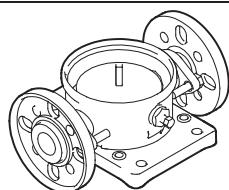

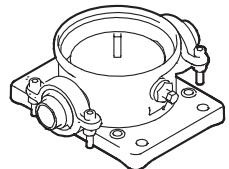

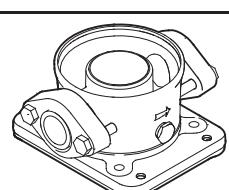

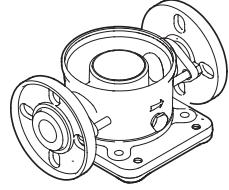

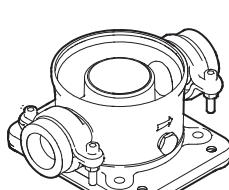

| Couplings | Pump type | Pipe stub | Rated pressure | Pipework connection | Rubber parts | Number of coupling sets needed | Product number |
|---|---|-----------|----------------|---------------------|--------------|--------------------------------|----------------|
|  | CRI(E), CRN(E) 1s, 1, 3 and 5 TM00 3808 1094 | Threaded | 1160 psi | 1 1/4" NPT | EPDM | 1 | 4013010 |
| | | | | | FKM | | |
|  | CRI(E), CRN(E) 10, 15 and 20 TM00 3808 1094 | Threaded | 1015 psi | 2" NPT | EPDM | 1 | 331301 |
| | | | | | FKM | | |

FlexiClamp base connections

All sets comprise the necessary number of bolts and nuts as well as a gasket/O-ring.

| Base connections | Pump type | Connection | Pipework connection | Rubber parts | Product number |
|---|--|---------------------------|---------------------|--------------|----------------|
|  | CRI(E), CRN(E) 1s, 1, 3 and 5 TM02 1144 0601 | Oval (cast iron) | 1" NPT | Klingersil | 96468491 |
| | | | 1 1/4" NPT | Klingersil | 96470781 |
| | | Oval (stainless steel) | 1" NPT | Klingersil | 96480850 |

Potentiometer for CRE, CRIE, CRNE

Potentiometer for setpoint setting and start/stop of the CRE, CRIE, CRNE pump.

| Product | Product number |
|---|----------------|
| External potentiometer with cabinet for wall mounting | 625468 |

G10-LON interface for CRE, CRIE, CRNE

The G10-LON interface is used in connection with data transmission between a Locally Operating Network (LON) and electronically controlled Grundfos pumps applying the Grundfos bus-protocol GENIbus.

| Product | Product number |
|-------------------|----------------|
| G10-LON interface | 00605726 |

LiqTec for CR(E), CRI(E) and CRN(E)

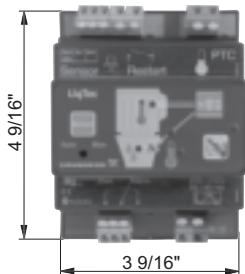

A dry-running protection device. The Grundfos LiqTec stops the pump immediately:

- if there is no liquid in the pump (dry-running).
- if the liquid temperature exceeds 266 °F ±8 °F.

When connected to the PTC sensors in the motor, the LiqTec also protects the motor against overheating.

LiqTec is prepared for DIN rail mounting in control cabinet.

Enclosure class: IP X0.

| LiqTec dry-running protection | Pump type | Voltage [V] | LiqTec | Sensor 1/2" | Cable 16.4 ft | Extension cable 49.2 ft | Product number |
|---|---------------------------|-------------|--------|-------------|---------------|-------------------------|----------------|
|  | CR(E) CRI(E) CRN(E) | 200-240 | ● | ● | ● | - | 96556429 |
| | | 80-130 | ● | ● | ● | - | 96556430 |
| | | - | - | - | - | ● | 96443676 |

Remote control, R100

R100 is used for wireless communication with the CRE, CRIE, CRNE pump. The communication takes place by means of infrared light.

| Product | Product number |
|---------|----------------|
| R100 | 96615297 |

Sensors for CRE, CRIE, CRNE

| Accessory | Measuring range | Product number |
|---|----------------------|----------------|
| Pressure sensor | 0-87 psi (0-6 bar) | 91136169 |
| • Connection: 1/4" NPT | 0-145 psi (0-10 bar) | 91136170 |
| | 0-232 psi (0-16 bar) | 91136171 |
| Includes a 6 ft cable with removable potted plug in addition to a standard plug for remote mounting. | 0-362 psi (0-25 bar) | 91136172 |
| | 0-580 psi (0-40 bar) | 91136173 |
| | 0-870 psi (0-60 bar) | 91136174 |

Gauges for CRE, CRIE, CRNE

12. Variants

Lists of variants - on request

Although the Grundfos CR(E), CRI(E), CRN(E) product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs.

Below please find the range of options available for customizing the CR(E) pumps to meet the customers' demands. Contact Grundfos for further information or for requests other than the ones mentioned below.

Motors

| Variant | Description |
|---|--|
| Explosion proof motors | For operation in hazardous atmospheres, explosion-proof or dust-ignition-proof motors may be required. |
| Motors with anti-condensation heating unit | For operation in humid environments motors with built-in anti-condensation heating may be required. |
| Premium efficient motors | Grundfos offers motors from 1 to 100 Hp with a Premium efficiency class. |
| Different motor brand | If technically possible, Grundfos can fit the pump with a motor of a brand other than the standard. This will normally increase the time of delivery. Alternatively, the pump can be supplied without a motor (motor thrust rating must be checked). |
| Oversized motor | Ambient temperatures above 104 °F or installation at altitudes of more than 3280 ft above sea level require the use of an oversized motor (i.e. derating). |
| 4-pole motors | Grundfos offers standard motors fitted with 4-poles. |

Connections and other variants

| Variant | Description |
|------------------------------|--|
| Pipe connections | In addition to the wide range of standard flange connections, a 232 Psi DIN standard clamping flange is available. Customized flanges are available according to specifications. |
| TriClamp connections | TriClamp connections are of a hygienic design with a sanitary coupling for use in the pharmaceutical and food industry. |
| Electropolished pumps | To substantially reduce the risk of corrosion of the materials. For use in the pharmaceutical/food industry. |

Shaft seals

| Variant | Description |
|--|---|
| Shaft seal with FFKM O-ring material | Shaft seals with FFKM or FXM o-ring material are recommended for applications where the pumped liquid may damage the standard O-ring material. |
| Seal with flush, quench seal | Recommended for applications involving crystallizing, hardening or sticky liquids. |
| Cool-Top® shaft seal system | Recommended for applications involving extremely high temperatures. No conventional mechanical shaft seal can withstand liquid temperatures of up to 356 °F for any length of time. For that type of application, Grundfos' unique air-cooled shaft seal system is recommended. In order to ensure a low liquid temperature around the standard shaft seal, the pump is fitted with a special air-cooled shaft seal chamber. No separate cooling is required. |
| Double shaft seal with pressure chamber | Recommended for applications involving poisonous or explosive liquids. Protects the surrounding environment and the people working in the vicinity of the pump. Consists of two seals mounted in a "back-to-back" arrangement inside a separate pressure seal chamber. As the pressure in the chamber is higher than the pump pressure, leakage is prevented. A dosing pump or a special pressure-intensifier generates the seal chamber pressure. |
| CRN MAGdrive | Magnetically driven pumps for industrial applications. Key applications are industrial processes involving the handling of aggressive, environmental, dangerous or volatile liquids, e.g. organic compounds, solvents, etc. |

Pumps

| Variant | Description |
|---|--|
| Horizontally mounted pump | For safety or height reasons, certain applications, for instance on ships, require the pump to be mounted in the horizontal position. For easy installation the pump is equipped with brackets that support motor and pump. |
| Low-temperature pump to -4 °F | Exposed to temperatures down to -40 °F, coolant pumps may require neck-rings with a different diameter in order to prevent impeller drag. |
| High-speed pump up to 681 psi | For high-pressure applications, a unique pump capable of generating up to 681 psi pressure is available. The pump is equipped with a high-speed motor, type MLE. The direction of rotation is the opposite of that of standard pumps, and the chamber stack is turned upside-down, as a result of which the pumped liquid flows in the opposite direction. |
| High-pressure pump up to 696 psi | For high-pressure applications, a unique double pump system capable of generating up to 696 psi pressure is available. |
| Low-NPSH pump (improved suction) | Recommended for boiler-feed applications where cavitation may occur due to poor inlet conditions. |
| Belt-driven pumps | Belt-driven pumps designed to operate in places with limited space or where no electrical power is available. |
| Pumps for pharmaceutical and biotechnological applications | CRN(E) pumps designed for applications requiring the sterilization and CIP capability of pipes, valves and pumps. (CIP = Cleaning-In-Place). |

CR(E), CRI(E), CRN(E)

Vertical, non-self-priming, multistage, in-line, centrifugal pump for installation in pipe systems and mounting on a foundation.

The pump has the following characteristics:

- impellers and intermediate chambers are made of AISI _____ Stainless steel

- Pump head and base are made of _____

- Power transmission is via cast iron split coupling.

- pipework connections is via _____

The motor is a _____ -phase AC motor.

14. Further product documentation

WebCAPS

WebCAPS is a **Web-based Computer Aided Product Selection** program available on www.grundfos.com.

WebCAPS contains detailed information on more than 220,000 Grundfos products in more than 30 languages.

Information in WebCAPS is divided into six sections:

- Catalog
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

Catalog

Based on fields of application and pump types, this section contains the following:

- technical data
- curves (QH, Eta, P1, P2, etc.) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

Literature

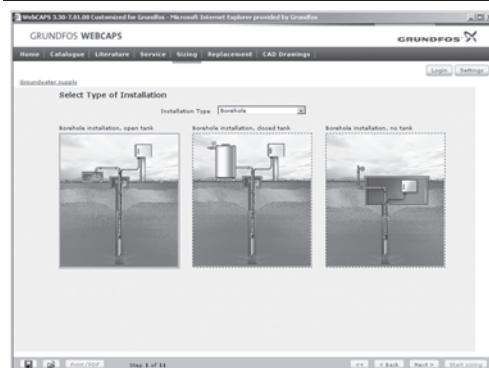

This section contains all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalog and Service kit instructions
- quick guides
- product brochures.

Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps.

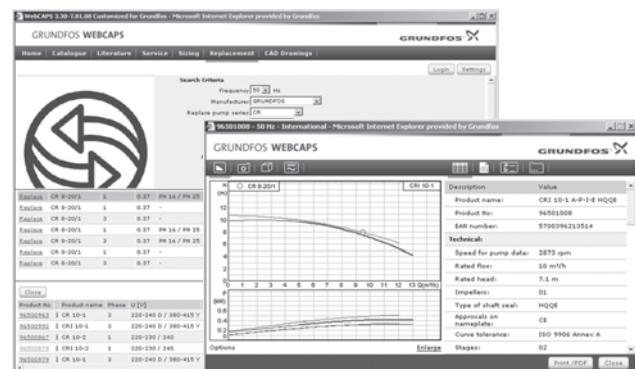

Furthermore, the section contains service videos showing you how to replace service parts.

Sizing

This section is based on different fields of application and installation examples and gives easy step-by-step instructions in how to size a product:

- Select the most suitable and efficient pump for your installation
- Carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- Analyze your selected pump via the built-in life cycle cost tool
- Determine the flow velocity in wastewater applications, etc.

Replacement

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump. The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

CAD drawings

In this section, it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

2-dimensional drawings:

- .dxf, wireframe drawings
- .dwg, wireframe drawings.

3-dimensional drawings:

- .dwg, wireframe drawings (without surfaces)
- .stl, solid drawings (with surfaces)
- .eppt, E-drawings.

WinCAPS

Fig. 29 WinCAPS CD-ROM

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 220,000 Grundfos products in more than 30 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no internet connection is available.

WinCAPS is available on CD-ROM and updated once a year.

Subject to alterations.
